Back Up Options

The Photo Backup Stick allows you to back up using different methods.

Backing Up from Phones & Tablets – Direct Connect – The Photo Backup Stick Universal can connect directly to iPhones/iPads and Android phones and tablets. One end of the stick is an Apple Lightning connector used to connect to Apple iOS devices. USB adapters for Android devices are also included. Connect the adapter for your Android device to the stick and plug it in. See the sections below on how to install the apps.

Backing Up Computers – Back up photos and videos on Windows or Mac computers by plugging the stick into the computer and running the backup app.

Backing Up Cell Phones and Tablets Using a Computer – You can back up photos and videos from iPhones and iPads as well as Android phones and tablets by connecting them to the computer, plugging in the Photo Backup Stick, and running the backup app.

Backing Up Using a Mac Computer

To back up photos and videos from Mac computers and laptops, iPhones and iPads, and/or Android phones and tablets, follow the steps below:

1. Plug the Photo Backup Stick into your computer and run the PhotoBackupStickMac app.

2. Click the "Start Backup" button.

Note: You can back up from the computer and all connected devices at the same time.

3. Select where to back up from. If you have phones or tablets connected to the computer, they'll show up on this screen. You may need to trust the computer on the device screen.

Note: By default, the option to back up videos is checked. If you do not want to back up videos, uncheck this box. Videos over 4GB in size are too large to back up on the FAT32 formatted Photo Backup Stick drive and will be skipped.

4. Click the "Start Backup" button and wait for the backup to complete.

Note: Backups may take several hours to complete depending on the number of photos and videos being backed up. Video files can be very large and may take extra long to copy to the USB drive.

Backing Up iPhones & iPads Using the iOS App

To back up from Apple iOS phones or tablets without using a computer, follow the instructions below:

1. Plug your stick into your device. You should be prompted to install the Photo Backup Stick app. If you are not, go to:
<https://apps.apple.com/us/app/photo-backup-stick-universal/id1482134898>

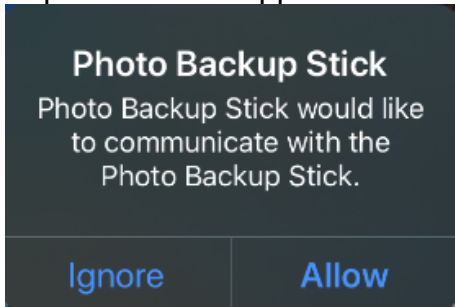

2. Plug the Photo Backup Stick Universal into your iPhone or iPad.

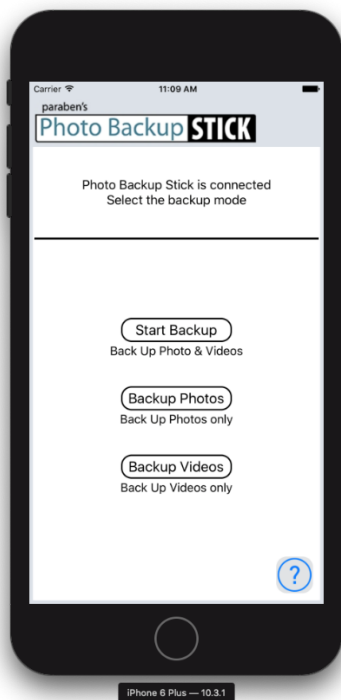

Note: Use the end with the same tip as your charging cable.

3. Tap to allow the app to communicate with the stick:

4. Start your backup by tapping on Start Backup to back up all photos and videos, Backup Photos to backup photos only, or Backup Videos to backup videos only.

Backing Up Androids Using the Android App

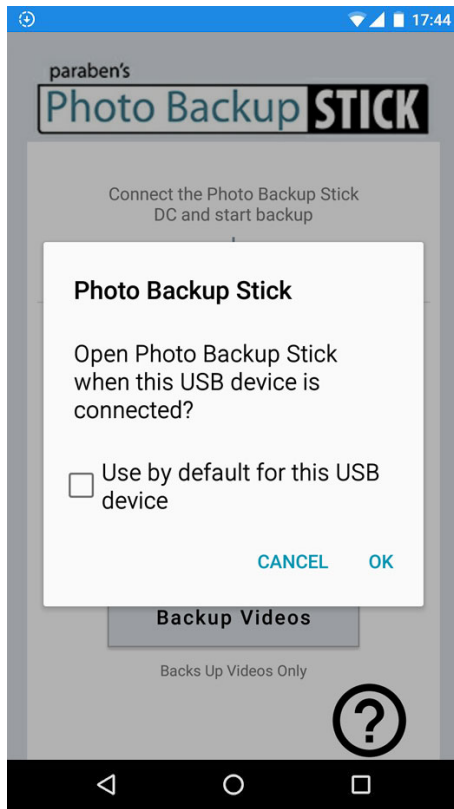

To back up Android phones or tablets without using a computer (must have the Photo Backup Stick DC version), follow the instructions below:

5. Go to the Google Play store and download the Photo Backup Stick DC app.
6. Install the app and open it.
7. Connect the adapter that was included with your Photo Backup Stick for Android DC version to the end of the stick:

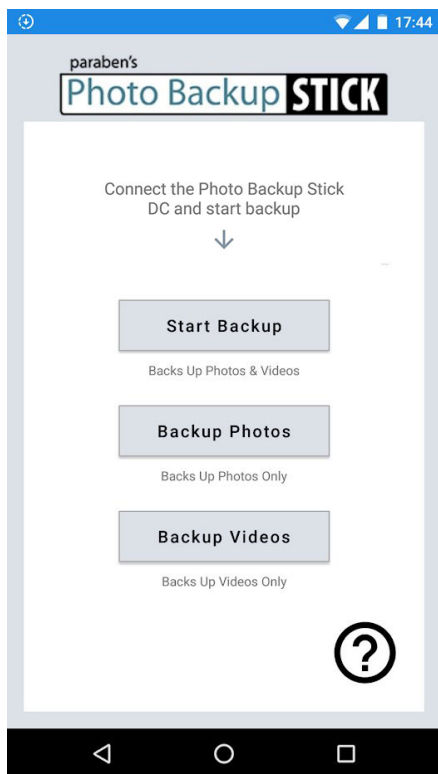

Note: Use the adapter with the same tip as your charging cable.

8. If you are asked to assign the drive to the Photo Backup Stick app, check the box and tap “OK”.

9. Tap the "Start Backup" button to back up all photos and videos or tap the "Backup Photos" to only back up photos or tap the "Backup Videos" button to only back up videos.

View Backup Up Files

Viewing on Windows – Plug the Photo Backup Stick into your computer and wait for the window to appear. Open the “backup” folder.

Viewing on Androids – Plug the Photo Backup Stick into your Android device and go to My Files and tap the USB drive. Open the “backup” folder.
